

AUTODIAGNOS

In Depth Diagnostics For The Multi-Make Repairer

Keeping You Up To Date

Diagnostic Software Updates

All of our Diagnostic Software is now supplied on a single Multi-Cartridge and updates are distributed frequently on CD and downloadable from the Internet. A USB cable is supplied to download the latest software from your computer to the Multi-Cartridge.

Whilst the data sheets for our Diagnostic Software Kits are kept as up to date as possible, we are constantly improving and updating the software, so you may find that our data sheets can't keep up with our software development!

"All Makes" Connectivity Straight Out of the Box

Each of our Diagnostic Software kits is designed to work with our Multi-Cable, which auto-configures for any vehicle make and system in our range, no matter which adapters are connected. No jumpers or switches are necessary. Simply plug into the diagnostic connector and the Multi-Tester Pro does the configuration automatically. The Multi-Cable is included with all new Multi-Tester Pro handsets along with a universal 16-pin lead, which means that you will have "all makes" connectivity straight out of the box.

*"All Makes" is limited to the current Autodiagnos diagnostic software range. Connectivity allows EOBD functionality, more advanced functionality is subject to the purchase of the relevant activation codes and excludes Volvo.

Subscription

If you would like to take advantage of our software update programme, the most cost effective way is for you to subscribe to our low-cost plan. For a single annual fee you will receive all the updates for the diagnostic software you have purchased from us. It's the same low fee even if you own all of our software applications! You can either download software updates from our website or await the arrival of the update disc.

The customer is always right

“The Multi-Tester Pro has certainly proved to be the technicians’ choice here. Every time I need to use it, I have to join a queue.”

Ed Dodwell R.A. Engineering,
Reading Berkshire.

“The depth of coverage in the software far surpasses any other diagnostic tool I have owned or used, Multi-Tester Pro is the closest you will get to a vehicle manufacturers tool. I should have bought it years ago”.

John Padgett, Carcroft, Central Garage
Doncaster.

The growing need for a Diagnostic Tool

The technician of today is constantly facing advanced technology and complexity each and every time he repairs or services his customers’ cars. It’s not unusual today to find even a low specification car with up to 15 computers or controllers onboard. These computers control the engine, ABS, traction control, climate control, dashboard and many other systems.

Approximately 30% of the manufacturing cost of a new vehicle is the electronics, wiring and associated systems.

It is more important than ever for technicians to make a fast and accurate diagnosis. Autodiagnos can provide the independent workshop with the means to carry out this lucrative and profitable work. A well-equipped workshop is able

to instil confidence in its customer base at the same time as winning new customers.

The Autodiagnos Multi-Tester Pro is the most cost effective investment the modern independent workshop can make.
